Labeling & Documentation
Bar coding
RFID
Bill of Lading
Manifests
Pick Tickets

Customer & Supplier Communications
Shipper automates the *receiver's* dock
Bar coded Manifest, ASNs,
Automated communications
Automated cross reference

Traditionally, manufacturers have had to choose between the very limited inventory management features that came as an afterthought with their accounting/ERP system or jumping into a full blown WMS (warehouse management system). For over a decade Operations Technologies has been providing sophisticated solutions to industry leaders. Operations Technologies has taken that knowledge and created a utility that bridges the gap between the two traditional extremes

While not a full feature WMS, with an installed price of $30,000 per location (excluding travel and hardware costs) SupplySync provides many of the core features of its larger relatives in an easily implemented non-disruptive solution.

Beyond even traditional WMS features, SupplySync includes powerful vendor and customer communications. "Super-Manifest" and "Super-ASNs" provide detailed and translated shipment data. The end result is up to an 85% reduction in customers administrative receiving cost.
